

Louis Nguyen

Solution Architect / Senior Software Engineer

huynguyennbk@gmail.com · Vietnam · 14/12/1996 · github.com/louishuyng · linkedin.com/in/louishuyng

Solution Architect with 8+ years of experience designing scalable, event-driven systems on Kubernetes, Azure, and AWS. Focused on high-throughput backend architecture, observability, and infrastructure-as-code, most recently scaling per-service write throughput 10x while reducing infrastructure costs by 30%. Regular open-source contributor to Raycast and Neovim.

EXPERIENCE

Solution Architect — Regask

Jul 2025 to Present

- Redesigned high-traffic services around Knative and event-driven patterns on Kubernetes, increasing throughput by 40% and reducing infrastructure costs by 30%.
- Implemented a Redis write-behind caching strategy, scaling per-service write throughput from 10,000 to 100,000 requests per second while cutting database load and operating cost.
- Building the authorization server that connects the full application suite to Claude as a custom connector, exposing internal services over MCP (Model Context Protocol) under scoped, per-user access.
- Introduced durable execution with Temporal and designed the event orchestration model behind the AI workflow builder, so multi-step agent flows survive restarts and resume from the last completed step instead of replaying end to end.
- Instrumented all microservices with Grafana Cloud, establishing performance baselines, SLOs, and anomaly alerts that moved the team from reactive firefighting to proactive incident response.
- Built an internal tool that simulates the full service mesh locally, reducing high-priority issue resolution time by 20% and removing shared environments from the development feedback loop.
- Rolled out Backstage as a single developer portal, consolidating the service catalogue, development workflow, and release process behind one interface and replacing scattered manual deploy steps.
- Led Terraform adoption across the DevOps team, standardising provisioning and eliminating environment drift.
- Consolidated Kafka, database, and supporting infrastructure provisioning under Kubernetes with Crossplane, giving the team a single control plane and full visibility into service dependencies.

Senior Software Engineer — Regask

Feb 2024 to Jul 2025

- Architected a highly available, fault-tolerant platform on Azure with redundancy and failover across every critical component, removing single points of failure.
- Rewrote memory-bound Node.js services in Go, reducing memory per service from 1.5 GB to 400–500 MB (50–60%) and sustaining higher throughput on fewer resources.
- Delivered enterprise SSO with Okta across SAML and OIDC, unifying authentication between services and meeting enterprise security requirements at onboarding.
- Introduced Technical Solution Documents as a pre-implementation alignment step and ran structured code reviews for 5–7 engineers, shortening review cycles and reducing bugs reaching production.

Senior Software Engineer — PerxTech

Jan 2022 to Sept 2023

- Architected Ruby services sustaining 10,000 requests per second at peak, providing headroom to scale without additional infrastructure.
- Built an ETL pipeline for banking data imports, reducing import time from 5 hours to 15 minutes per GB (95%) and lowering cloud transfer spend.
- Built an API gateway with Traefik, centralising routing, load balancing, and access control across all microservices.
- Led a cross-functional team of 5 engineers and orchestrated Kafka event workflows with AWS Step Functions, keeping concurrent workstreams aligned.

Backend Engineer (Consultant) — [ProductPine](#)

Jan 2022 to Dec 2022

- Designed the backend pipeline integrating Shopify with the e-commerce application, keeping storefront and platform data in sync.
- Built a reconciliation service that detected data drift between Shopify and the application and corrected it automatically, replacing manual clean-up.
- Made the two-way sync idempotent, deduplicating webhook deliveries so retries and concurrent updates could not create duplicate orders.
- Owned the core e-commerce domain, building the domain services and product features the rest of the application depended on.
- Ran deployments and pipeline monitoring for the team, alerting on sync failures so data issues were caught before they reached customers.

Full Stack Software Engineer — [Oivan](#)

Jan 2021 to Jan 2022

- Led a frontend team of 2–3 engineers on a Saudi real estate platform and authored the technical documentation covering its critical microservice flows.
- Optimised complex queries, reducing request latency from 3 seconds to 500 ms.
- Introduced gRPC for internal service communication, lowering latency on high-traffic paths.
- Raised code quality across Angular, Go, and Ruby codebases through structured testing and review.

Full Stack Software Engineer — [Nucleus Studio](#)

Jan 2020 to Jan 2021

- Built hybrid mobile applications in React Native backed by NestJS services, including livestream and video call features over WebRTC.
- Integrated Firebase, GCP, and AWS services, and implemented Stripe payment processing.

Platform Developer — [Aleph Labs](#)

Jan 2018 to Jan 2020

- Built reusable frontend components and an SDK that streamlined integration with the microservices platform, both adopted across multiple product teams.
- Designed and implemented the authentication APIs, strengthening platform security.

TECHNICAL SKILLS

- **Languages:** Go, Ruby, TypeScript, JavaScript
- **Cloud & Infrastructure:** Azure, AWS, GCP, Kubernetes, Knative, Crossplane, Terraform
- **Architecture:** Microservices, Event-Driven Architecture, Durable Execution (Temporal), API Design, gRPC, Data Pipelines
- **Platform & Operations:** Kafka, Redis, Traefik, Grafana Cloud, Observability & SLOs, DevOps
- **Security:** SSO, Okta, SAML, OIDC

EDUCATION

Bachelor of Science — Da Nang University of Science and Technology

CERTIFICATIONS

- [Claude Code in Action](#) — Anthropic Education, Feb 2026
- [HashiCorp Certified: Terraform Associate \(003\)](#) — Sept 2023
- [CKAD: Certified Kubernetes Application Developer](#) — The Linux Foundation, Aug 2023
- [Professional Scrum Master I \(PSM I\)](#) — Scrum.org, Jul 2023
- [AWS Certified Security – Specialty](#) — Jul 2023
- [AWS Certified Solutions Architect – Associate](#) — Jun 2023
